

Prospective Registry Of MultiPlex Testing

PROMPT is an online research registry for patients and families who:

- Have had multiplex genetic testing
- Have a harmful genetic change or uncertain variant which may be linked to an increased risk of cancer

What is the purpose?

PROMPT provides patients, physicians, and researchers with an opportunity to share information about multiplex genetic testing so that we can all better understand the meaning of these genetic mutations.

Updates from Researchers

Using a platform housed at **PatientCrossroads**, individuals can enroll in PROMPT and provide data by completing questionnaires about their personal and family health histories. PROMPT can also be used as a way to receive updates from physicians and researchers.

How is personal information shared?

Patients can choose whether to fully participate by sharing personal identifying information, or whether to partially participate by sharing data without any identifying information. No matter how you participate, PROMPT pledges to protect participant privacy. In addition, **PatientCrossroads** uses sophisticated security features to ensure that physicians and researchers get the data they need without breaches in confidentiality.

What is MultiPlex Testing?

MultiPlex (also known as Multi-Gene Panel Testing) is a newer form of genetic testing. These panel tests look for mutations in several different genes at once. All of the genes on the panel tests have been tied to an increased risk of cancer, but we know more about the risks associated with some of the genes than we do the others. These genes include, but are not limited to, *ATM*, *BARD1*, *BRIP1*, *CDH1*, *CHEK2*, *PALB2*, *PTEN*, *RAD51C*, *RAD51D*, *STK11* and *TP53*.

Register for PROMPT in 3 easy steps!

- ① Log on to your computer and go to
www.promptstudy.org
- ② Click on the ***Register Now!*** Button
- ③ Fill in the required information and
Start PROMPT Survey
